OF THE STATE OF OKLAHOMA and )  
OKLAHOMA SECRETARY OF THE )  
ENVIRONMENT C. MILES TOLBERT, )  
in his capacity as the )  
TRUSTEE FOR NATURAL RESOURCES )  
FOR THE STATE OF OKLAHOMA, )  
Plaintiff, )  
vs. ) 4:05-CV-00329-TCK-SAJ  
TYSON FOODS, INC., et al, )  
Defendants. )

-----

THE VIDEOTAPED DEPOSITION OF

ROGER OLSEN, PhD, produced as a witness on behalf

of the Defendants in the above styled and numbered

cause, taken on the 2nd day of February, 2008, in

the City of Tulsa, County of Tulsa, State of

Oklahoma, before me, Lisa A. Steinmeyer, a Certified

Shorthand Reporter, duly certified under and by

virtue of the laws of the State of Oklahoma.

2 MR. GEORGE: Let's stop and change the tape  
3 here.

4 VIDEOGRAPHER: We're now off the Record.

5 The time is 10:02 a.m. 10:03AM

6 (Following a short recess at 10:03  
7 a.m., proceedings continued on the Record at 10:12  
8 a.m.)

9 VIDEOGRAPHER: We are back on the Record.

10 The time is 10:11 a.m. 10:12AM

11 Q Mr. Olsen, back to -- I'm sorry. Back to  
12 Exhibit 4, I think you put it away. We were talking  
13 about labs, and a time or two, sir, you have  
14 mentioned that data from some of the labs on  
15 particular samples may have been rejected. Do you 10:12AM  
16 recall that, saying that?

17 A Yes.

18 Q What do you mean by rejected?

19 A We have an extensive quality control procedure  
20 when we receive data back from a laboratory, and we 10:12AM  
21 review every piece of information that's received  
22 from that laboratory, review the laboratory's case  
23 narrative and their own internal QA/QC samples. We  
24 also have sets of samples that are blind standards,  
25 blind duplicates that we send to them, review that 10:13AM

1 data, and that's put into our quality control report  
2 and that is work done under my direction through  
3 Todd Bergershire, and then they qualify the data.  
4 This is a typical procedure done by EPA all the time  
5 and really where that was developed and learned,  
6 those procedures on EPA projects. Now, we don't do  
7 a strict data validation because we don't review the  
8 laboratory notes but we review the important things,  
9 and we call it a QC control, and then we QC review,  
10 and then we produce a report, and that will have our  
11 analytical chemist's notes on there whether that  
12 data needs to be qualified. There's a variety of  
13 qualifiers. It usually needs to be estimated,  
14 usually a J estimate or --

10:13AM

10:13AM

15 Q Usually a what?

10:14AM

16 A Usually it's a J. That's just the EPA's  
17 signature for estimated, and there's a variety of  
18 things they add onto that determining -- depending  
19 on why it was estimated, and then there's an R.  
20 That means it's rejected.

10:14AM

21 Now, in the case of FoodProtech, that  
22 determination was made by Jodi Harwood. After we  
23 identified some potential problems, we went to her  
24 as the expert, and she worked with the labs through  
25 their procedures in determining what procedures she

10:14AM

1 determined were correct for the samples that we were  
2 analyzing, and she actually made some  
3 recommendation. They changed some procedure, so  
4 there's some data that was rejected before a certain  
5 date and some data that was rejected after a certain

10:15AM

6 date, and there was some data that rejected -- all  
7 of the analysis were rejected, and so that  
8 determination was really determined by our quality  
9 control review, but we went to her for the

10 definitive analysis of that data, and then our

10:15AM

11 quality control people made sure that that data was  
12 flagged with an R in the database, and that went to  
13 Drew Santini and he made sure it gets into the  
14 database, and that ultimately ends up in Robert van  
15 Waasbergen's hand with that qualifier on it.

10:15AM

16 Q Has all of the data from FoodProtech been  
17 rejected?

18 A No.

19 Q Okay. So some of the data generated by  
20 FoodProtech, including bacteria data, is being  
21 relied upon as valid by experts retained by the  
22 Oklahoma Attorney General's office; correct?

10:15AM

23 A Yes, and they only did bacteria analysis.

24 Q Okay. How would I determine what data you  
25 have determined to be valid from FoodProtech and

10:16AM

1 what data you've rejected?

2 A You have all the reports, our quality reviews.

3 That's all noted on those.

4 Q You believe I have the quality reviews. Is  
5 that the title of the report?

10:16AM

6 A Yes. It's a CDM document that we attach to  
7 all the laboratory reports.

8 Q Okay.

9 A It's a quality control review.

10 Q But now you have a database that has a list.  
11 You can print out a list of all of the samples that  
12 have been rejected, all of the samples that have  
13 been qualified; correct?

10:16AM

14 A That's correct.

15 Q Okay, but you think you've also produced the  
16 quality review sheets that came with some of the lab  
17 work; is that right?

10:16AM

18 A All the lab work we've received to date and  
19 have had the time to review, there's a quality  
20 review sheet with it.

10:16AM

21 Q Okay, and I don't have one of those in front  
22 of me, and I should have anticipated this issue. If  
23 I had a quality review sheet here in front of us  
24 today, what would I look for to determine readily  
25 whether all or part of the data on that report has

10:17AM

1 been rejected or qualified?

2 A There's a summary sheet up front with things  
3 like did it meet holding times, a whole checklist of  
4 things that our quality reviewers do and check off.

5 Plus, that top sheet has a summary of what they  
6 found, and then there's a signature of the chemist  
7 that was doing that, and behind that is the actual  
8 analytical report we received from the lab, and if  
9 the lab also puts in a case narrative, that would be

10:17AM

10 there, too, and if they submit QA/QC samples, those  
11 would be there, too. So our analytical chemist that  
12 does review goes there, and you'll see their actual  
13 mark through a sample with the qualifier on it and  
14 any notes, and if they had to communicate with the  
15 lab, all these E-mail communications or phone  
16 conversations are attached in those data packages  
17 that are sent to you.

10:17AM

18 Q Mr. Olsen, do you all go through that process  
19 and create that document for every sample that you  
20 receive from every lab?

10:18AM

21 A Did it for FoodProtech, General Engineering  
22 Laboratory, A & L Laboratory, Environmental  
23 Microbiological Laboratory. Had not done that -- we  
24 did that for Aquatic Research.

25 Q You skipped North Wind?

10:18AM

Page 57

1 do the bulk of our samples. We request them very  
2 early for the case narrative that summarize their  
3 quality control, quality review reports. They're  
4 internal, and then we do another quality control  
5 review.

10:20AM

6 Q Mr. Olsen, when you are reviewing data in this  
7 case, sampling results to form the opinions that  
8 were expressed in your affidavit, what was -- what  
9 did you rely upon to distinguish valid from invalid  
10 data, these underlying sheets or a listing in a  
11 database?

10:20AM

12 A I was involved in both of those. So, for  
13 instance, I don't ever use rejected data.

14 Q But how did you determine that it might be  
15 rejected data when you were putting together your  
16 opinions; was it because you saw a flag in the  
17 database?

10:20AM

18 A Well, I was involved in the original  
19 rejections, so I knew which data was rejected and a  
20 lot of the data I know what it's qualified to, but  
21 it's identified in the database when it comes to us.

10:20AM

22 Q Okay, and you rely on the database in  
23 distinguishing rejected versus unrejected data; is  
24 that right?

25 MR. PAGE: Object to the form.

10:21AM

TULSA FREELANCE REPORTERS  
918-587-2878

0fdb33a7-25e2-45d1-840a-eb333b912f26

1 A The data that came to me didn't have the  
2 rejected data in it. It automatically gets screened  
3 out in what's given to us for the signature.

4 Q Okay. So you only saw the valid data; is that  
5 right? 10:21AM

6 A I only used the valid data. I saw it all.

7 Q Someone else screened out the rejected data  
8 before you got it; is that right?

9 MR. PAGE: Object to the form.

10 A Again, I think I already described that 10:21AM  
11 process and who rejected it and how it gets into the  
12 database, and it's very clearly identified with a  
13 rejected statement.

14 Q Who screened out the rejected data for you  
15 before you did your analysis? 10:21AM

16 MR. PAGE: Same objection.

17 A I directed the person who qualified that with  
18 Dr. Harwood, and then when we create -- I think what  
19 you're asking is how do I create the data I used for  
20 the statistical analysis. That comes from Drew 10:21AM  
21 Santini through Rick Chappell in a request, you  
22 know, and that request screens out the rejected  
23 data.

24 Q Did you rely on any qualified data in your  
25 analysis in this case? 10:22AM

1 A Depending on what it was, that qualified data  
2 usually came through in our -- in our request that I  
3 used, and as the expert in this area, I have to make  
4 a case-by-case determination whether that data was  
5 good for the purposes that I want to use it for. So 10:22AM  
6 in this case, we qualified a lot of the P data,  
7 phosphorus data, excuse me, phosphorus data and,  
8 again, when I talk phosphorus data, there's multiple  
9 forms of phosphorus. You know, there's soluble  
10 reactive phosphorus; there's total dissolved; 10:22AM  
11 there's dissolved total and so forth and so forth,  
12 so we analyze like six or seven forms of that, but  
13 when A & L was initially doing the samples, besides  
14 the coulometric data, we didn't reject that, but  
15 they were also analyzing a technique called 60-10, 10:23AM  
16 which is just ICP, not ICP-MS, which we changed to.  
17 We qualified all that data because we found an  
18 interference with a variety of compounds, and the  
19 higher concentrations weren't giving us good data.  
20 I could have used the lower concentrations, but any 10:23AM  
21 60-10 data, it came through in the database to me to  
22 use, but I did not use any 60-10 data in my final  
23 analysis. So that's my determination that I don't  
24 want to use that data, I didn't need to, so to be  
25 conservative, I didn't use that qualified data. 10:23AM

1 A That's correct.

2 Q Okay, and on the basis of some of the concerns  
3 voiced by Dr. Harwood in this and some other  
4 letters, you ultimately invalidated the work or the  
5 data generated by FoodProtech; correct?

12:00PM

6 A Not all of it. Some of it was deemed  
7 acceptable; some of it was rejected as we previously  
8 discussed.

9 Q Right. Did you believe Dr. Harwood's concerns  
10 were legitimate?

12:00PM

11 A She's the expert. I believed her.

12 Q You see on Page 3, turn, and I've underlined  
13 two sentences, and it appears to me that Dr. Harwood  
14 is challenging some support that FoodProtech put  
15 forward trying to justify their lab work. Do you  
16 recall that?

12:00PM

17 A Yes.

18 Q Okay, and the supporting documents that they  
19 identified appears that she is challenging them  
20 because they were not peer reviewed; is that right?

12:01PM

21 A That's what she says.

22 Q Okay. Can you read those two sentences,  
23 please, for the Record?

24 A Regarding 2.23 and 2.242, and let me check to  
25 see if I know what those are. I don't know what

12:01PM
